RE: Ironco Concrete Products, DOE/021/004, Iron County,
Utah

On November 16, 1984, Tom Munson and Steve Cox visited the suspected mining areas in Section 2, Township 28 South, Range 9 West. The Company had been advised to cease any mining activity associated with State Lease ML 18847 and submit the required notifications in a letter from John Blake, State Lands, dated August 7, 1981.

The road to the lease area had been washed out and the site was not accessible to vehicles. We hiked on foot to the disturbance. It appeared that it had not been worked for some time, although it was impossible to tell when activities had ceased.

From the vantage point of the lease area, several additional mined areas could be seen. The most recent activity appears to have taken place in Section 35, Township 27 South, Range 9 West. Recent road construction and a fresh stockpile indicates that these areas have been worked this year.

No individual site exceeded two acres of disturbance, however, collectively they may. The Bureau of Land Management should be contacted for information on these leases.
